# ALIGNMENTS

Thibition of cell adhesion mediated through ELAM-1 mol. binding used in treating chronic inflammation, rheumatoid arthritis.

The sorials, etc.

Bisclosure Fig. 1, 46pp. English.

The 1951, in its nascent form, bears no sialyl-Lex side chains. The inventors designed a molecule including several such sites for attachment of sialyl-Lex side chains (see R24442, FT). The additional N-linked glycosylation sites are introduced at locations which impair complement itxing and Fo receptor binding ability They are preferably located in the CH2 region of the 1g molecule.

Antibodies bearing multiple sialyl-Lex determinants are useful for disrupting undesirable interactions between calls or practices. Observating this interaction has therapeutic applications, for 02-27N-1992 (first entry) Sequence encoding antibody molecule 1gG1. Antibody; immunoglobulin G1; ds. T he gene (760739) encoding IgG1 (W10550) can be subjected to site-
of directed multagenesis in order to introduce one or more N-linked
allocation sites into the IgG1 molecule (see also W1051)

Eukaryotic host cells co-transfected with a vector carrying the
the mutated IgG1 gene and with a vector that expresses an alpha-
ct the mutated IgG1 gene and with a vector that expresses an alpha-
ct the glycosylation sites of the antibody molecule can be used in the
prodn of sialyl-Le(x)-modified antibody such an antibody has
therefore a prodn of sialyl-Le(x)-modified antibody inflammation and
decreasing extravasation-dependent organ damage and/or clotting.

Example 14; Page 87: 172pp: English.

The buman placental denomic lone library cloned into the phage vector lambda FIX II was screened with the human VHI family specific cliqoniclentide (see 9224/8). Phage clone lambda 49.8 was isolated and a 6.1 kb Xbal fragment contg. the variable seqment VH49 8 subcloned into pNN03 to generate plasmid pH49.8.

An 800 bp region of this insert was sequenced. VH49.8 was found.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ó

A human placental genomic DNA library cloned into the phage vector lambda FIX II was screened with the human VH1 family specific oligonucleotide 044184. Began clone lambda 49.9 was isolated and a 6 lkb Xbai fragment containing the variable segment VH40 B was subcloned into pNNO3 to generate plasmid pVH49.8. An 800bp region of this insert was sequenced (044185) and VH49.8 found to have an open reading frame and intext splicing and recombination signals, indicating that the gene is functional.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Transgenic non-human animals conty, immunes)-bullin heavy chain trans gene – used to produce useful antibodies by isotype

The present sequence is the variable heavy chain gene segment containing human DNA fragment, vh49 8; which was injected into half
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               day mouse embryo pronuclei, to generate an unrearranged heavy chain minilocus transgene. The resulting transgenic mice can be used for the production of heterologous (i.e. human) antibodies against specific antigens, this comprises immunising a mouse with a preselected antigen and collecting antigen binding heterologous
                                                                                                                                                                                               21-ARR-1997 (first entry)

DNA fragment vh49 8, containing variable heavy chain gene.

Variable; heavy chain; gene segment; human; DNA fragment; vh49.8;
unrearranged; minilocus; transgene; transgenic; mouse;
production; heterologous; antibody; gamma; immunoglobulin; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             gggottgagtggatgggaaggatcatccctatccttggtatagcaaactacgcacagaag

                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0
                                                                                                                                                antibody CEA6. VH (T7215-32) and VL (T7213-35) gene sequences antibody CEA6. VH (T7215-32) and VL (T7213-35) gene sequences were determined for anti-hCEA antibodies CEA1-CEA7 (see W19976-85) that had been obtained by selection from a universal phage display library. A claimed specific binding member (A) comprises an hCEA specific antibody antigen binding domain that has a dissociation constant for hCEA of less than 1 x 10 -8 M is non-cross-reactive with human liver cells, and preferentially binds to the A3-83 centracellular domain of hCEA and/or to cell-associated hCEA over hCEA over soluble hCEA. Preferred (A) include pairings of VH and VL variants. (A) is used to detect cells expressing hCEA, in vitro, especially tumour cells for diagnosing cancer, e.g. adenocarcinoma of the color, lung or breast.

Heavy, light, chain, antibody, D. memorional, peripheral, blood;
Lymphocyte, hepatilis A virus, HAV, sero, positive, patient,
murine, BSB3; polyadenylated; cDNA library; human; kappa; L; H; ss.
                                            Specific binding members for human carcinoembryonic antigen - bind to the A3-B3 extracellular domain of hCEA and are substantially non-cross-reactive with human liver cells; used for diagnosing
                                                                                                                    Example 1: Fig la: 128pp: English.
This nucleotide sequence codes for the heavy chain variable region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               256 etgagatetgaggaeaeggeegtgtattaetgfgeggga 294

The sequences given in 035040-100 encode the heavy and light chains

The sequences given in 035040-100 encode the heavy and light chains

of Antibody D respectively. Antibody by is a monoclonal antibody which
was derived from peripheral blood lymphorytes from a hepotitis A virus

(HAN) sero positive patient. Antibody D is closely related in nature

to murine antibody RFR: Total PNA was isolated from antibody D

expressing cells and polyadenylated RNA was extracted. These polyA

RNA's were used to prepare a CDNA library which was screened for human

Further heavy (H) chains and two positive clones were detected.

Example 1: Page 83; 125pp: Engalish.

T15202 and T15203 are the heavy and light chain variable domains of a human anti-tetanus toxoid immunoglobulin (Ig) encoded by a Pocmb3 based expression vector. The heavy and light chain variable domains are used in an example to demonstrate the prodn. of antibodies for an antibody library using mutagenic primers. Mutagenic primers of the invention have sequences at their 3' and 5' ends both capable of binding different framework regions linked by a sequence 6 to 50 contraction. Different immunoglobulins produced using the primers may be used to produce antibody libraries having diverse and novel immunospecificities and affinities. By using mutagenic ONs an extremely large population of different randomised binding sites can be created and use of the universal light chain increases the number of combinations which yield functional heterodimeric antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0

HIV-induced disease

Taxample 1: Page 185-188: 249pp; English.

This sequence represents the pcomb3 phagemid expression vector. This cvector has been designed to allow for anchoring of expressed proteins on the bacteriophage coat protein. Gene III of filamentous phage encodes the bacteriophage coat protein. Gene III of filamentous phage encodes the bacteriophage coat protein. Cpili (Cp3), which is expressed prior to extrusion in the phage assembly process on a bacterial membrane and accumulates on the inner membrane facing into the periplasm of E. coli. This plasmid was used within the scope of the invention to express the and accumulates on the inner membrane facing into the periplasm of E. coli. This plasmid was used within the scope of the invention to express to and soluble forms of the Fabs. The vector was designed for the cloning conditions which bind to HIV gpl20. pcomb consists of a DNA molecule having two cassettes to express one fusion protein. Fd/cp3, and one cloning of combinatorial Fab libraries. pcomb consists of a DNA molecule having two cassettes to express one fusion protein. Fd/cp3, and one soluble protein, the light chain. The finished vector comprises, operatively linked 5, to 3', a first cassette consisting of lac2 promoter/operator sequence. Sequences, a NoI restriction site, a ribosome binding site (RBS), a PelB leader, a spacer region, a cloning region bordered by 5' Xaol and 3' Xabi restriction sites, collowed by an expression control RBS, a PelB leader, a spacer region, a cloning region bordered by 5' Sacl and 3' Xabi restriction site. The pComb3 expression vector forms the basic construct of the MT4 Fab display phagemid expression vector forms the basic construct of the MT4 Fab display phagemid expression vector, pMT4'3 (see also continue for the production of synthetic human Fab callibration in the invention for the production of synthetic human Fab Sequence 4691 BP; 1170 A; 1171 C; 1232 G; 1118 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3424 etegageagtettggggetgaaggtgaagaageetgggteeteggtgaaggteteetgeagg 3483

modified version of the phagemid expression vector, profiled as dequence represents the expression of soluble Fabs which are perspected into the perplasants space which is regulated from the altanine phosphatase (phoA) promoter. This plasmid was used within the scope of the invention to express various mutagenised human Fab's which comprise the invention to express various mutagenised human Fab's which comprise consists of a DNA molecule having two cassettes to express two soluble proteins a heavy chain and a light chain. The vector comprises, operatively linked 5' to 3' a first cassette consisting of the phoA promoter/operator sequences, an ECORI restriction site, a ribosome binding site (RBS), an OmpA leader, a Sfil restriction site, a spacer sequences, and more promoter/operator sequences, an ECORI restriction site, and a second cassette consisting of an expression control RBS. a PelB leader a human sites, and consensus annot terminus spacer region comprising the sequence EVOLLE, a cloning region bordered by 5' shol and 3' Spel restriction site. The Pho-TI expression control stop sequences and a Not restriction site. The Pho-TI expression control stop sequences and a Not restriction site. The Pho-TI expression control stop sequences and a Not restriction site. The pho-TI expression control stop sequences and a Not restriction site. The pho-TI expression control stop sequences and a Not restriction stuffer that is 1200 bp in length and a heavy chain stuffer that is 1200 bp in length and a heavy chain stuffer that the heavy and light chain stuffer second is the heavy and light chain stuffer second is the heavy and light chain stuffer second is the heavy and light chain stuffer second is the heavy and light chain stuffer second is the heavy and light chain stuffer has heavy and light chain variable domains of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5354 ctegageagtettaggaetgaggtgaagatgaageettgggteeteggtgaaggteteetgeagg 5413

claim 14; Fig 4B; 39pp; English
A human anti-Varicella zester virus monoclonal antibody was prepd.
A human anti-Varicella zester virus monoclonal antibody was prepd.
A human anti-Varicella zester virus monoclonal antibody.
One resultant trioma neutralised VZV in the absence of complement.
This cell line, designated cell line pr0348A9, produced an antibody genes of the 938A9 antibody were cloned using PCR. At least two heavy chain (gamma-1) and two light chain (kappa) specific clones sequenced (see 08249 & 01250; respectively).
Sequence 441 Bp; 89 A; 125 C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         132 tggaggcacettcagcaaetttgetatcagetgggtgggacaggeeettggacaaggget 191

                                                                                                                                                                                                                                                                                  Monoclonal human rheumatoid factor - obtd. by prodn. and secretion of hybriddma obtd. from cell fusion of human bone marrow derived lymphocyte and P3Ul mouse myeloma cell Disclosure: Page 5: 7pp; Japanesse.

The sequence shown encodes the variable region of the heavy chain of a human monoclonal antibody rheumatoid factor YES8C. The gene may be isolated from the bone marrow soln. of a rheumatoid arthritis patient and used to produce hybridomas, allowing prodn. of the rheumatoid arthritis factor at constant quality in large quantites.

                                                                                                                                                                                           Monoclonal antibodies to HIV-1 - directed against glyco:protein gp120, useful for passive immunotherapy or product of anti-idiotype vaccines (Claim 11, Page 21.22; 34pp; English.

The monoclonal antibodies (MAb's) designated Gp13, Gp44 and Gp68 react with HIV-1 gp120 glycoprotein variants containing the amino acids Asn88, Lysi17, Asn262 and Tyr 435 but exhibit at least 50% reduced reacion with gp120 variants in which these amino acids have been deleted or substituted. The MAb's are useful for passive production of vaccines.
